Power Whips

for Power Distribution Units (PDUs)

WAIN

- Plug-and-play on site for faster installation
- All-in-one cable and connector assembly from one source
- Easier upgrades and maintenance requirements
- Minimise power failures with easy swap out to minimise downtime
- Local product development teams and in-region manufacturing for simplified sourcing and maximum scalability

Data centre power whips, also known as power cables, are crucial components for power distribution. Power whips distribute power evenly from PDUs to various components within a data centre, minimising downtime risk.

Efficient power whips are crucial for uptime reliability, safety and scalability.

Connectorised power whips can be configured to our customers own specification using standard or customised connectors.
